Questions to Myself

- Which is the future of office suites?
- Which is the future of personal productivity software?
- Office suites - and, by extension, personal productivity software - will need to reflect the evolution of the enterprise, which has become a borderless entity with a geographically and temporally dispersed workforce.

Questions to Myself

- How will users of office suite evolve?
- Users of office suites will focus on business objectives.
- They will need tools that are increasingly accessible in terms of usability.

Questions to Myself

- **How artificial intelligence can help office suite users?**
- Artificial intelligence may be able to help users with the most repetitive tasks, but - for some time yet - it will not be able to help them with content other than the most basic.

Questions to Myself

- Which is better: desktop based or cloud based collaboration?
- Collaboration will become a key aspect of individual productivity as the workforce becomes more distributed and integrated through digital tools such as office suites.

Questions to ChatGPT

Buzzwords in Summaries

Asking Help to ChatGPT

- If you had to present the future of the office suite to an audience of developers, what would you mention in the slides?
- If you had to present the future of the office suite to an audience of end users, what would you mention in the slides?

Summary of Presentations

DEVELOPERS

The Future of Office Suites: Innovations and Opportunities

- Importance of staying informed about evolving trends and technologies in office suite development
- Encourage developers to explore and innovate in this space

USERS

The Future of Office Suites: Revolutionizing Work Environments

- The future of office suites is characterized by innovation, collaboration, and adaptability
- By embracing emerging technologies and focusing on user-centric design, office suites are revolutionizing work environments and shaping the future of productivity

My Final Thoughts

- Collaboration on the desktop and in the cloud will become the most important feature and must be transparent to the tool.
- The user interface needs to adapt to the user, whatever the type of data and document, and whether the user is working on the desktop or in the cloud.
- Desktop and cloud office suites need to evolve in parallel, enabling transparent transitions based on the needs of the environment, the situation and the user.
- Software and document security will become a key factor and must be the same in all situations, whether on the desktop or in the cloud.
- Data and the documents it contains must also be transparent to the desktop or cloud environment, while maintaining high levels of security, resilience and interoperability.
