QR Code / Barcode

- **Integration:** Barcode and QR Code dialog now available in the online platform.
- **Asynchronous Operation:** Modified QR code generation dialog to operate asynchronously, enhancing functionality and responsiveness.
- **JavaScript Dialog Enablement:** Enabled the dialog as a JavaScript dialog in vcl/jsdialog/enable.cxx.
- **Menu Entries:** Entries added in notebookbar and classic menu for seamless access by online users.
- **Visual Satisfaction:** Ensured dialog's visual appearance meets expectations for optimal user experience.

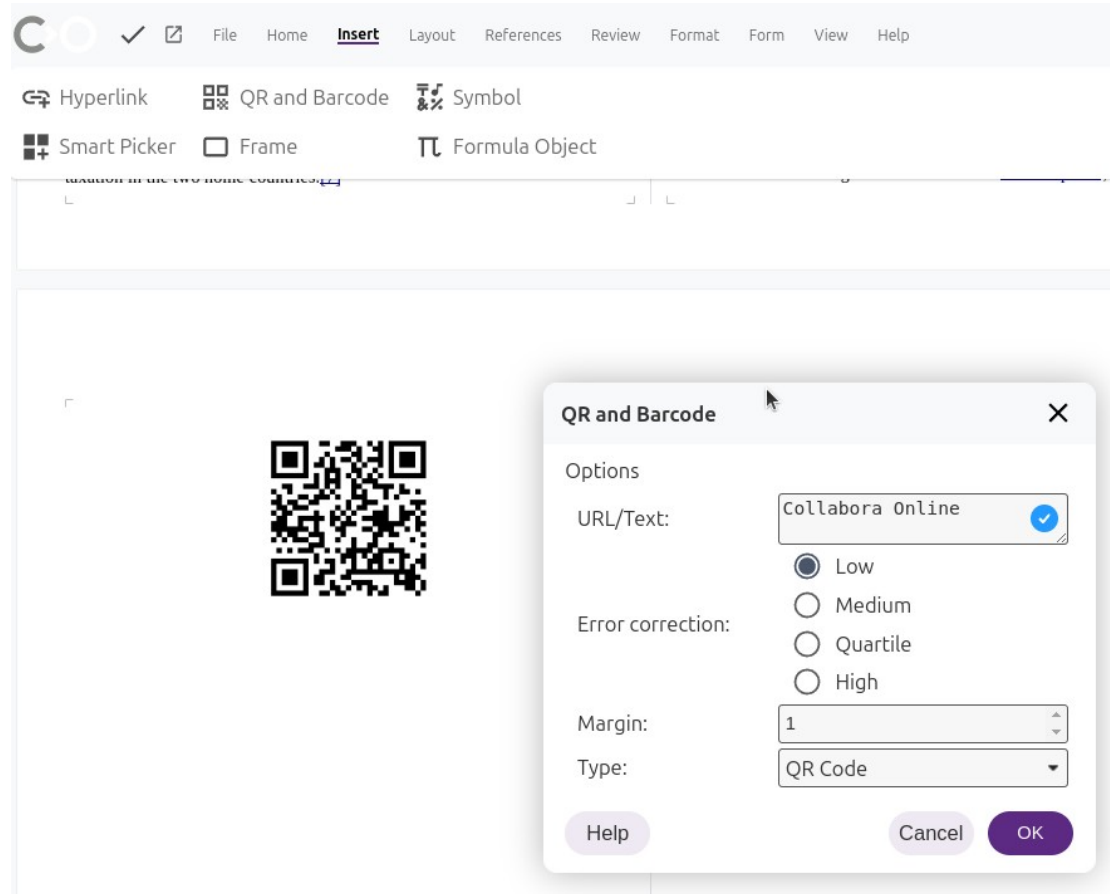

QR Code / Barcode

- Input: Use URL or text to generate the code.
- Error Correction: Enhances QR code's damage recovery capability.
 - Low: Recovers 7% of data.
 - Medium: Recovers 15% of data.
 - Quartile: Recovers 25% of data.
 - High: Recovers 30% of data.
- Margin: Sets the code's surrounding margin width.

Enhanced Document Help Section

Enhancements to the Document Help Section

- **Clarity in Categorization:** We've improved the labeling and categorization of subject areas within the help section, making it easier for users to find the information they need at a glance.
- **Enhanced Search Functionality:** A new feature now allows users to conduct free-form searches for specific content, enabling precise and direct navigation to relevant help topics, thereby improving the overall user experience in finding support information.

Enhancements to the Document Help Section

- **Search Feature Implementation:**
 - Users can now search within the help section using specific terms to quickly locate relevant information.
 - The system highlights sections containing the search terms, while non-matching sections are hidden, streamlining the search process.
- **Handling No Match Scenarios:**
 - This approach mirrors the styling and animation of the status bar search box, offering a familiar visual cue to users without the need for additional translations.

Dialogue: With Matching Result

Word Count

Text documents

How do I get a word count of my document?

Word count is available in **Tools** → **Word count**. A dialogue box shows word counts for selection and for the whole document.

Word Count

	Selection	Document
Words	15	58
Characters including spaces	49	249
Characters excluding spaces	44	217
Asian characters and Korean syllables	0	0

Help

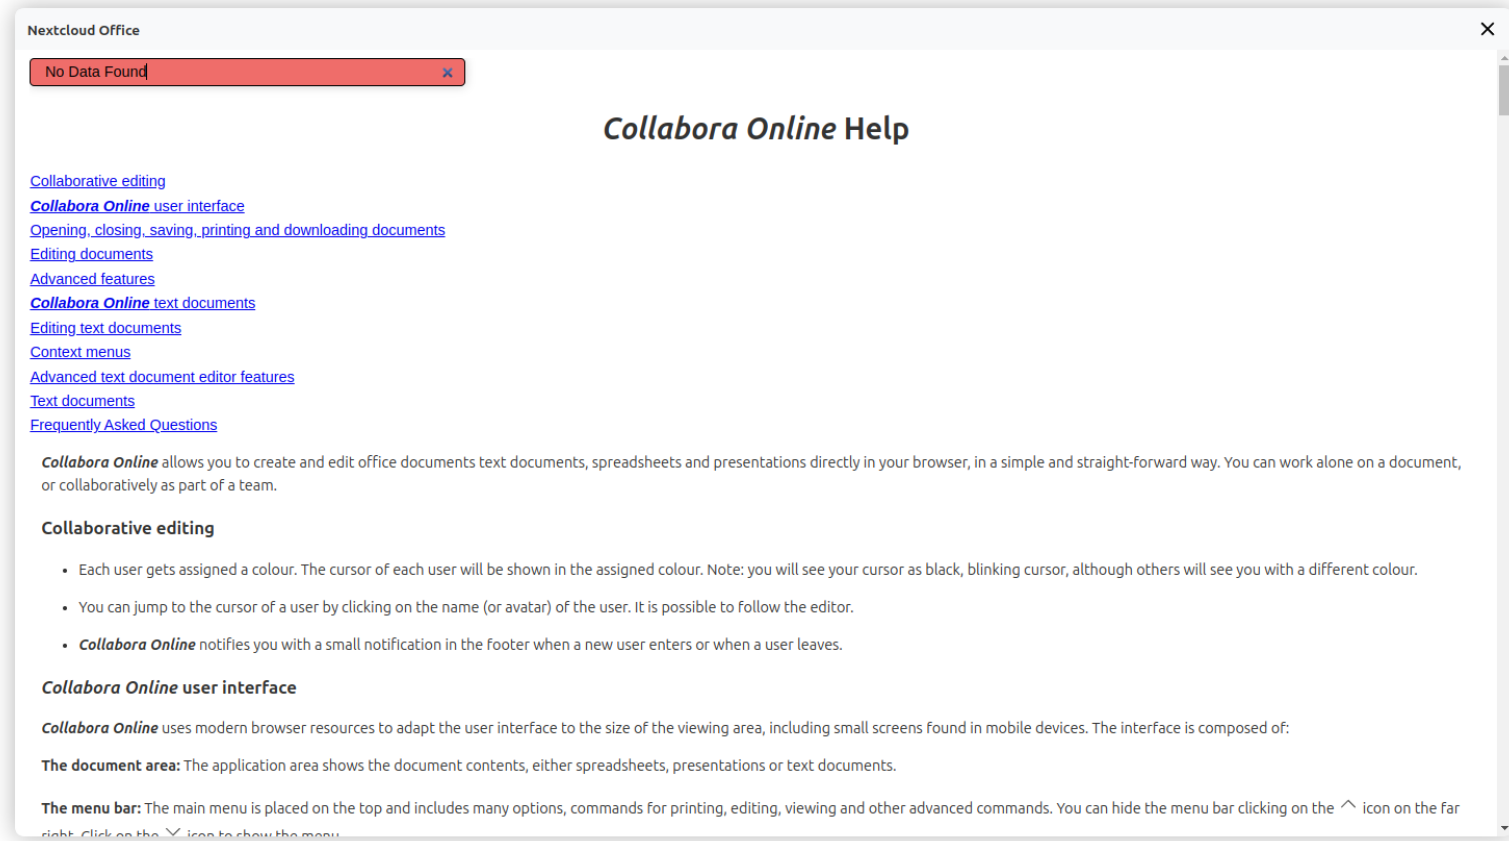

Close

Word count is also displayed in the status bar. If no text is selected the word count is for the whole document. Otherwise the word count is for the selected text.

OK

Help Dialogue: No Data Found
